Objective

To work as a **Junior Java Developer**, contributing to the development and maintenance of backend applications using Java, REST APIs, and relational databases, collaborating with development teams to build scalable and high-quality solutions.

Skills

Experience with API development using **Java, Spring Boot, MySQL, Docker**, API consumption with **Angular**, and **microservices architecture**.
Experience with automated testing including **End-to-End tests using Cypress**, unit testing with **Karma**, API testing using **Postman**, and database validation with **MySQL**.
English level: Intermediate (B1) – reading, writing, and speaking.

Professional Experience

MobileMed – Technology Solutions for Medicine – Development Assistant
Feb 2025 - Feb 2026

Worked in software quality assurance performing technical task analysis, requirement validation, and execution of functional, integration, and regression tests.
Developed and maintained automated tests using frameworks such as **Cypress**, executed API tests with **Postman**, and performed data validation using **MySQL**.

Collaborated directly with development, product, and support teams, identifying issues, proposing improvements, and ensuring alignment between business requirements and delivered solutions.
Produced complete technical documentation, including test cases, evidence reports, process flows, and diagrams.
Also contributed to continuous improvement of QA processes and increased delivery reliability.

Education

Bachelor's Degree in Computer Science
USCS - Universidade Municipal de São Caetano do Sul
Feb 2022 – Dec 2025

Projects

SGPIC – Scientific Research Project Management System (USCS)
Full Stack Developer

Full stack platform created to digitalize and automate the academic project lifecycle (submission, enrollment, and evaluation), improving standardization, traceability, and reducing manual work.

Stack: Angular, FastAPI (Python), MySQL, MongoDB, Docker, REST APIs.
